PORTABLE BORING MACHINE MECO MANPO 100

MANPO 100 AUT

TECHNICAL FEATURES:

Recommended maximum bore diameter.	500 mm
Stroke	150 mm lenght
Spindle	F-156
subsequent treatments.	Hardened and ground diameter 70 mm.
Spindle equipment.	Morse taper tip to bore smaller diameter or more length.

- Electrical wiring box has to be placed some distance from the machine.

- The connecting coupling between the boring and the machine on which you must perform the work will have to make every customer depending on the application.

- The machine has a circular logging and screws for mounting the coupling system is required.

- Automatic model with separate gear motor for advancement and on / off using a simple clutch system .

- Speed and constant feed . Optional placement of a speed for both engines. With both directions : right and left.

- Construction of the aluminum chassis , with an approximate weight of 70 kgs .
