**JMT offers quality machine tools
for all your sheet metal fabrication needs.**

JMTUSA.com

Email: JMT@JMTUSA.com

Toll Free: **855-773-7727** (855-PRESS-BRAKE)

JMT sells and services quality metal fabrication machine tools for a wide range of sheet metal and structural steel working applications that include bending, rolling, cutting, drilling, positioning, punching, shearing and welding.

JMT, a division of Jorgenson Industrial Companies, is a family owned business established in 1967. Roger Jorgenson made it his mission to build this company on the foundation of strong customer service. His children now continue this tradition since assuming leadership of the company in 2008 and establishing the **JMT** brand.

JMT is supported by an ever expanding team of industry professionals, which include experienced application engineers, sales consultants and veteran service engineers. **JMT** also has a resourceful parts and tooling department to keep your machines working at optimal performance.

The company has a 30,000 square foot showroom, warehouse and service center at its headquarters in Salt Lake City, Utah. **JMT** also has a warehouse and service center in Atlanta, Georgia.

A national network of over 30 select distributors trained to sell and service **JMT** machines are strategically located to provide the fastest response times to our customers.

JMT machines are built to our stringent set of design and quality standards in state-of-the-art manufacturing facilities. **JMT** partners with manufacturers that have extensive experience building machine tools for some of the leading suppliers in the industry.

JMT product designs combine accuracy, speed, flexibility, durability, reliability and advanced technology to deliver machines with the highest performance-to-price ratio in the industry.

JMT Shears

Our shears are durable, low distortion, precise cutting machines and are installed and working in a wide variety of sheet metal cutting operations across many industries.

Even large shear frames are machined with no repositioning, resulting in parallel and square surfaces.

Automatic adjustment of the hold-down pressure on our hydraulic shears firmly secures thick or thin sheets prior to the actual cutting.

JMT VS Series Shears

Variable Rake Touch Screen CNC Shear

1/4" – 1" Capacities

10' – 30' Lengths

Cutting angle and blade gap are adjusted automatically via the CNC for flexible and precise cutting process

JMT SBT Series Shears

Swing Beam Touch Screen CNC Shear

1/4" – 3/4" Capacities

10' – 13' Lengths

Heavy duty, robust swing beam cutting with optimized cutting parameters

JMT MS Series Shears

Mechanical High Speed Shear

12 Gauge – 10 Gauge Capacities

4' – 10' Lengths

All-in-one: High Speed, Accurate, Efficient, Performance

***JMT* VS SERIES SHEAR**

Variable Rake CNC Shear

- **1/4" – 1" Capacities**
- **10' – 30' Lengths**
- Solid design and durable body for precise cutting results
- Blade clearance, cut length and cutting angle are automatically adjusted by the CNC control
- User-friendly CNC touchscreen control unit
- Flexibility for thin/thick, narrow/wide sheets
- For more sophisticated use, the following can be easily integrated:
 - Automatic swing-up back gauge
 - Sheet support systems
 - Return to sender
 - Automatic feeding and conveyor systems
- For sheet handling and ease of operation, standard T-slotted sheet support arms and tabletop ball transfers make sheet feeding easy
- Fast cycle times for thick or thin sheets

JMT VS SERIES SHEAR FEATURES

Finger Guard, Ball Transfers and Hold Downs

The first 39" of the finger guard can be flipped up out of the way for easy viewing of the work piece. Hold downs are provided to ensure that the plate is held firmly along the length of the cutting area. The hold downs are distributed closer at each end of the table. This guarantees not only safer operation at the beginning and end of the cut but also the accuracy for narrow (short) plates at each end of the machine. Each independently acting hold down is capable of applying high pressure to hold the material being cut at the same time preventing thin and delicate materials from being marred.

Back Gauge (Standard)

The back gauge adjustment, standard range 39.37", has play free straight guides and recirculating ball screws; it has speed of 472 IPM, a setting accuracy of 0.004" and a repetitive accuracy of ± 0.0004 " (by means of a closed loop control). A standard feature of the back gauge is clearance compensation and it retracts automatically when cutting narrow strips.

The back gauge can swing away at the end of its travel to allow the shearing of unlimited length drop pieces.

Throat Depth (Standard)

Throat depth (minimum 13.78") in the side frames allows shearing of sheets longer than the blade length.

Light Curtain for Finger Protection (Optional)

Simple, secure handling.

JMT VS Series Shear CNC Control Units

USB 2.0

D-Touch 7 CNC Touch Screen Control Unit

- Large Color Touch Screen, Lcd: 7", 800 X 480 Tft Lcd Display
- Rapid data input
- Easy communication, USB Port: Usb port for user usb flash memory
- Ethernet: RJ-45 10/100M
- Operating System: Windows CE
- User Program and Steps: Unlimited
- Material Type: Unlimited

JMT VS Series Shear Pneumatic Sheet Support Devices

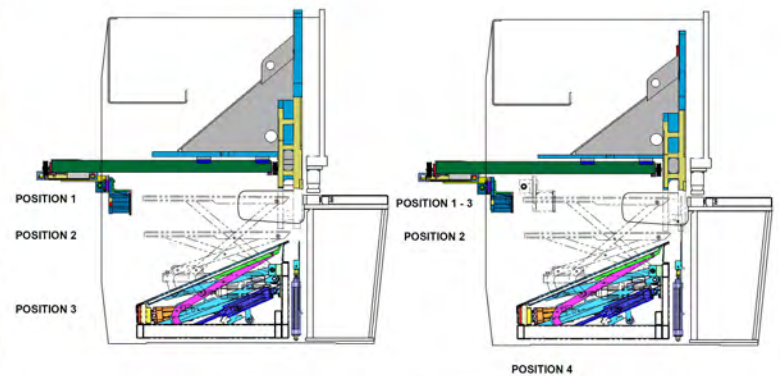

JMT 1

JMT 2

JMT 3

Anti twisting

Return to sender

Sheet Support Devices with Conveyor and Scrap Container

Scrap + Stacker + Alignment System

Front Feeding System

Heavy Machine Beam and Guides

JMT VS SHEAR STANDARD EQUIPMENT

- High yield, heavy duty steel construction (St 44) and stress-relieved frame
- User-friendly CNC Touchscreen control unit (D-Touch 7)
- Automatically adjusted rake angle by CNC
- Automatically adjusted blade gap by CNC
- Automatically adjusted cutting length by CNC
- Ball integrated front tables
- 39" ballscrew back gauge
- 39" flip-up finger guards
- 59" squaring arm with scale, T-slot and tilting stop
- 39" support arms with T-slot and tilting stop
- Illumination and shadow line
- 13.8" throat depth
- Automatic pressure-adjusted solid hold-downs
- Top and bottom blades with four sides
- Foot pedal
- World standard electrical/hydraulic components (parts stocked by JMT or available off-the-shelf from your local supplier)
- Heavy guillotine design

JMT VS SHEAR OPTIONAL EQUIPMENT

- High speed (stroke per minute)
- Laser cutting line
- Light curtains for finger protection
- Pneumatic sheet support device: "Standard" (JMT I)
- Pneumatic sheet support device: "Two Steps" (JMT II)
- Pneumatic sheet support device with "Return to Sender" (JMT III)
- Sheet support device with conveyor belt and scrap container
- Stacker + alignment cylinder
- CNC front feeding system
- Hydraulic anti-twist device
- Special throat depth
- 49" back gauge
- X1, X2 axis (Taper)
- Hydraulic swing-up back gauge
- Oil coolant
- Central lubrication manual
- Central lubrication motorized
- Adjustable angle stop 0-180°
- Additional support arms
- Special blades
- Special color
- Control panel on opposite position
- Temperature measurement

Many options and customizations are available — please contact us for details.

***JMT* SBT SERIES SHEAR**

Swing Beam Touch Shear

- **1/4" – 3/4" Capacities**
- **10' – 13' Lengths**
- World's heaviest and most robust swing beam shear construction
- Proven reliable design frame with rigid swing style upper beam
- Optimized cutting angle for minimized distortion
- Oversized roller bearing guides and box constructed swing beam for constant blade gap over full cutting length contribute to straight cuts
- Easy and low maintenance operation

FEATURES

USB 2.0

D-Touch 7 CNC Touch Screen Control Unit

- Large Color Touch Screen, Lcd: 7", 800 X 480 Tft Lcd Display
- Rapid data input
- Easy communication, USB Port: Usb port for user usb flash memory
- Ethernet: RJ-45 10/100M
- Operating System: Windows CE
- User Program and Steps: Unlimited
- Material Type: Unlimited

Single Point Blade Clearance (Standard)

A quick-set single point blade gap adjustment is conveniently located on the side frame of the machine. The operator can easily and quickly change this setting, as the material type and thickness demands, for a high quality blank.

Swing Up Or Away Back Gauge (Standard)

Back gauge can swing away at the end of its travel to allow the shearing of unlimited length drop pieces. Also available is a swing up style, which swings up and out of the way when the back gauge reaches the end of its range. Both styles allow shearing sheets of an unlimited length.

Finger Guard, Ball Transfers and Hold Downs

The first 39" of the finger guard can be flipped up out of the way for easy viewing of the work piece. Hold downs are provided to ensure that the plate is held firmly along the length of the cutting area. The hold downs are distributed in such a way that more are closer at each end of the table. This guarantees not only safer operation at the beginning and end of the cut but also the accuracy for narrow (short) plates at each end of the machine. Each independently acting hold down is capable of applying high pressure to hold the material being cut at the same time preventing thin and delicate materials from being marked.

Rear Sheet Support System (Optional)

When shearing long drop pieces of thin material the sheet can droop before it reaches the gauge bar, therefore making it impossible to gauge or, at least gauge accurately. In this system support arms which are pneumatically activated support the sheet while gauging and then automatically move away for shearing after the sheet is securely clamped and gauged. This also eliminates the need to front gauge and the need for the operator or additional personnel, to manually support the sheet from the rear side of the machine, which is not only costly, but unsafe.

JMT SBT SHEAR STANDARD EQUIPMENT

- High-yield, heavy duty steel construction (St 44) and stress-relieved frame
- User-friendly CNC Touchscreen control unit (D-Touch 7)
- Easy blade gap adjustment
- Ball integrated front tables
- 39" ballscrew back gauge with automatic swing-up
- 59" Squaring arm with scale, T-slot and tilting stop
- 39" support arms with T-slot and tilting stop
- Illumination and shadow line
- 39" flip-up finger guards
- Pressure-adjusted solid hold downs
- Foot pedal
- World standard electrical/hydraulic components (parts stocked by JMT or available off-the-shelf from your local supplier)
- Swing-up back gauge

JMT SBT SHEAR OPTIONAL EQUIPMENT

- High speed (strokes per minute)
- Motorized blade gap adjustment
- Laser cutting line
- Light curtains for finger protection
- Pneumatic sheet support device "standard" (JMT I)
- Hydraulic anti-twist device
- Special throat depth
- 49" back gauge
- Additional support arms
- Special blades
- Oil coolant
- Central lubrication manual
- Central lubrication motorized
- Adjustable Angle stop 0-180°
- Special color
- Control panel on opposite position
- Temperature measurement

Many options and customizations are available — please contact us for details.

***JMT* MS SERIES SHEAR**

Power Operated Shear

- **12 Gauge – 10 Gauge Capacities**
- **4' – 10' Lengths**
- All-in: Hi-Speed, Accurate, Efficient, Performance
- High performance motor-driven shear
- Direct drive technology provides efficient operations
- Speedy cutting without sacrifice from the cutting quality
- Productive solution for serial production
- Proven quality gear system and mechanical parts
- **Table Top Ball Transfers**

The MS series is equipped with ball transfers in the table. This assists in feeding the sheet as well as reducing marking on sensitive materials.

- **Sheet Hold Downs**

A simple spring style hold down system securely holds the material in place during the shearing process.

JMT MS SERIES SHEAR FEATURES

Thin Sheet Support System (Optional)

When shearing long drop pieces of thin material the sheet can droop before it reaches the gauge bar, therefore making it impossible to gauge or, at least gauge accurately. In this system support arms that are pneumatically activated support the sheet while gauging and then automatically move away for shearing after the sheet is securely clamped and gauged. This also eliminates the need to front gauge and the need for the operator or additional personnel, to manually support the sheet from the rear side of the machine, which is not only costly, but unsafe.
