

The SVC series

Your partner in meeting worldwide
food safety regulations

Science of smart design
Solving the hygiene equation

BOSCH

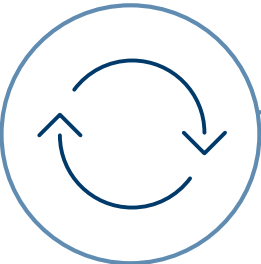

Invented for life

Finding the latest food safety regulations demanding?

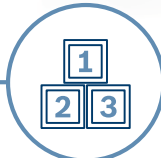

Achieve high hygiene standards with the SVC platform from Bosch

> Simplicity

Increase uptime and get your product to the market faster with a continuous motion vertical bagger

Open ergonomic design
easy to operate and maintain

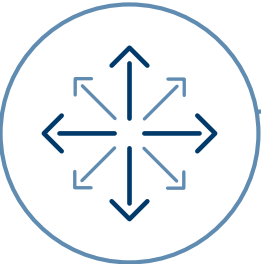

Easy set up
reduce training and improve operation

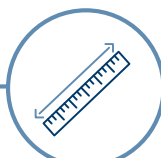

Tool-less changeovers
eliminate human error and minimize downtime

> Versatility

Optimize your investment with a customized solution. Select the execution to fit your requirements

Bag styles
pillow, gusseted, block bottom and corner seal

Bag widths
up to 400 millimeters

Sealing technologies
heat-, PE- and ultrasonic sealing

> Cleanability

Meet today's hygiene regulations and tomorrow's requirements with multiple cleaning methods from the SVC series

Dry wipedown
IP55

Low-pressure water and mild cleaning agents
IP55

High-pressure water and harsh cleaning agents
IP66

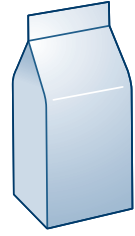

Future-proof your production with various bag styles and cleaning levels for any application

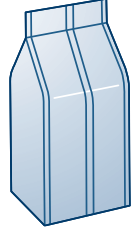

Pillow

Gusseted

Block bottom

Corner seal

Ensure smooth production process with easy-to-use and reliable SVC platform from Bosch

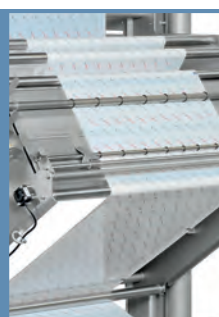

Ensure high product protection from the beginning of the packaging process with the hygienic format set design

Enhance product differentiation with multiple bag styles on one machine, including the new corner seal option
Additional option

Ensure fast film reel changeovers and optimal operator access with the ergonomic splicing table sloped 45 degrees

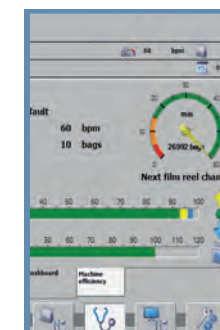

Simplify your operation and achieve clutter-free workspace with the open frame design

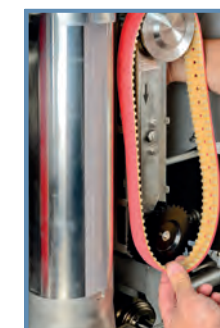

Reduce contamination risks with the HMI and operator buttons suited to high-pressure cleaning

Simplify training and operations with clear data read-outs and machine efficiency information to enhance OEE

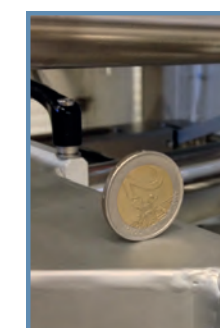

Maximize uptime and productivity with tool-less changeovers

Prevent contamination and bacterial build-up with rounded and tilted work surfaces to minimize flat parts

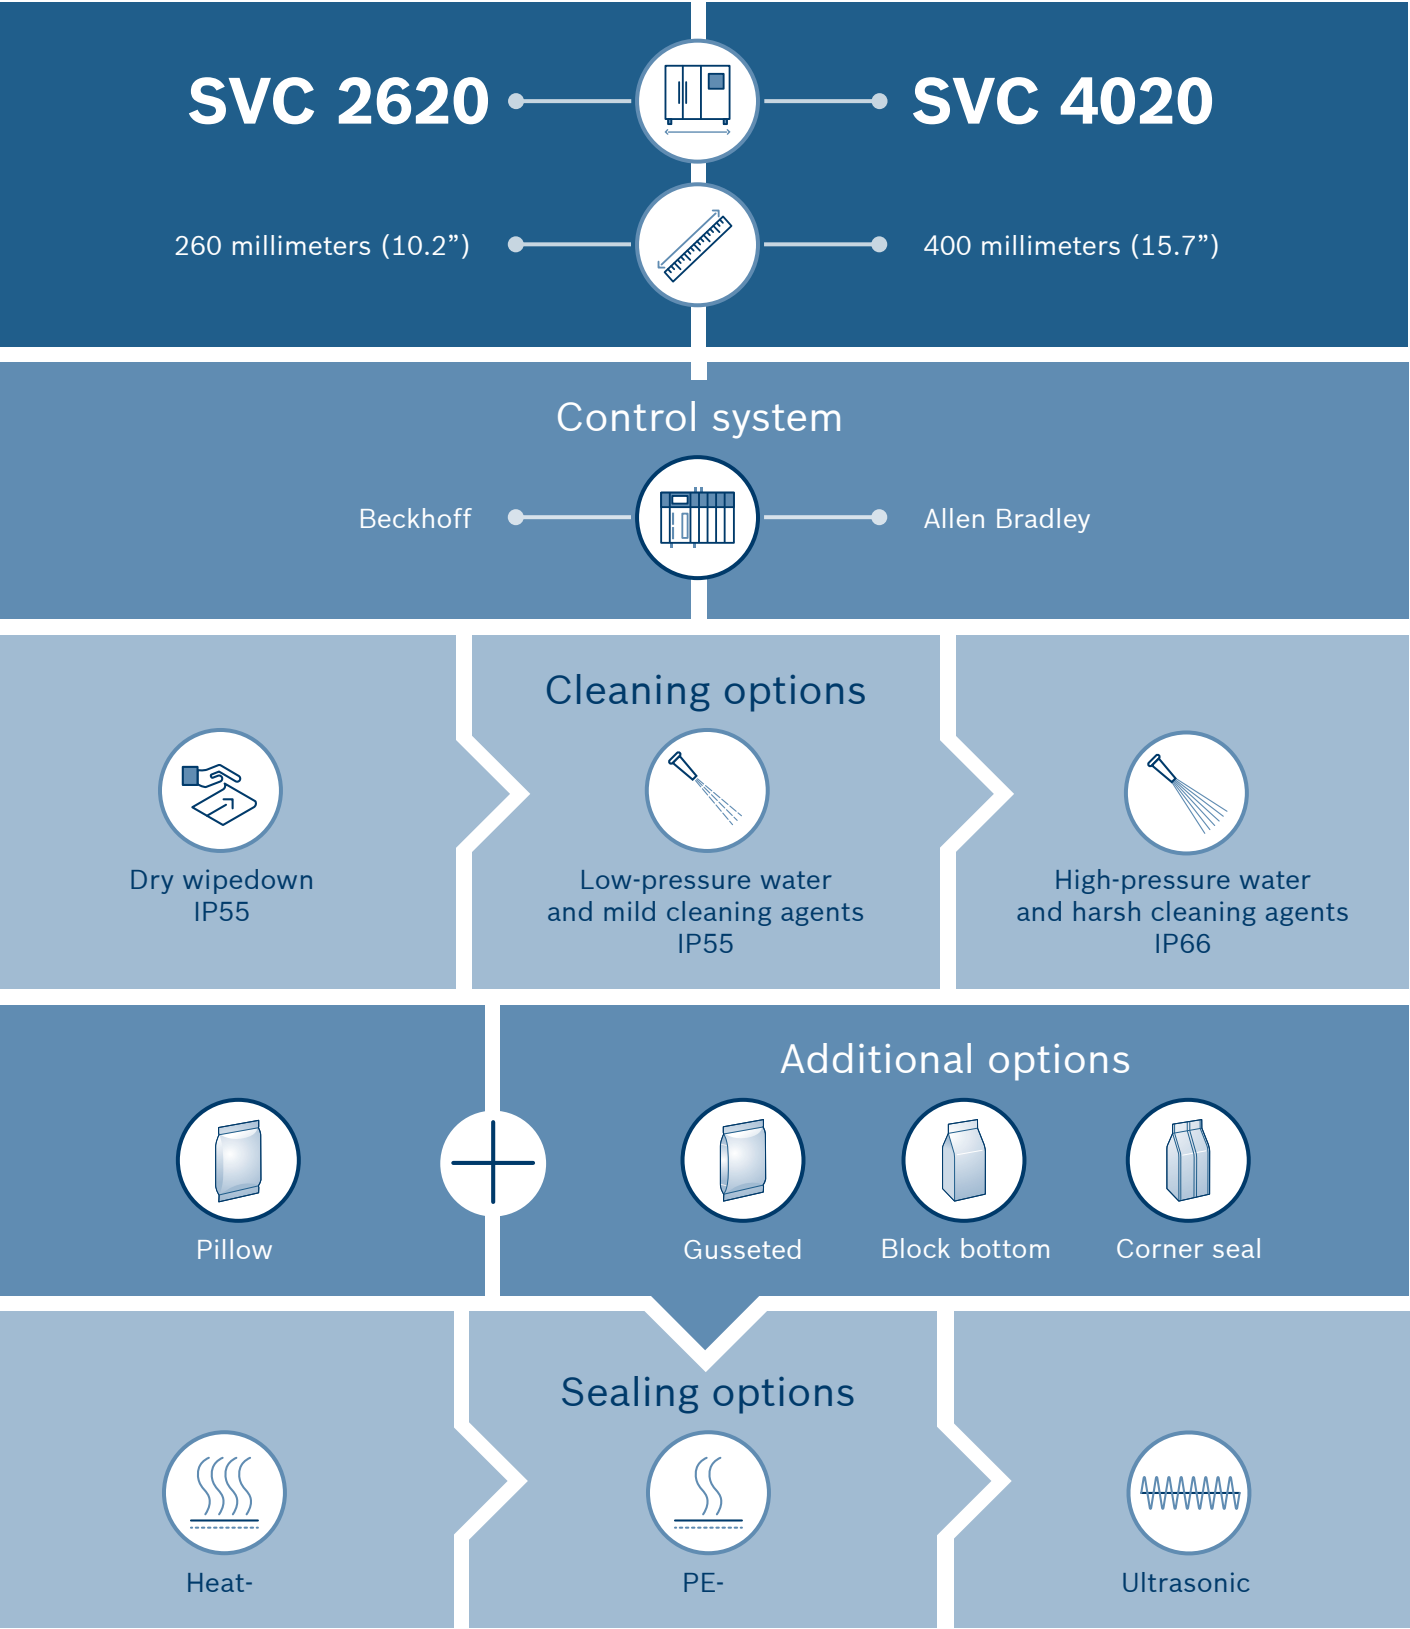

Bosch's well-proven technology

Custom-made solution for your specific application

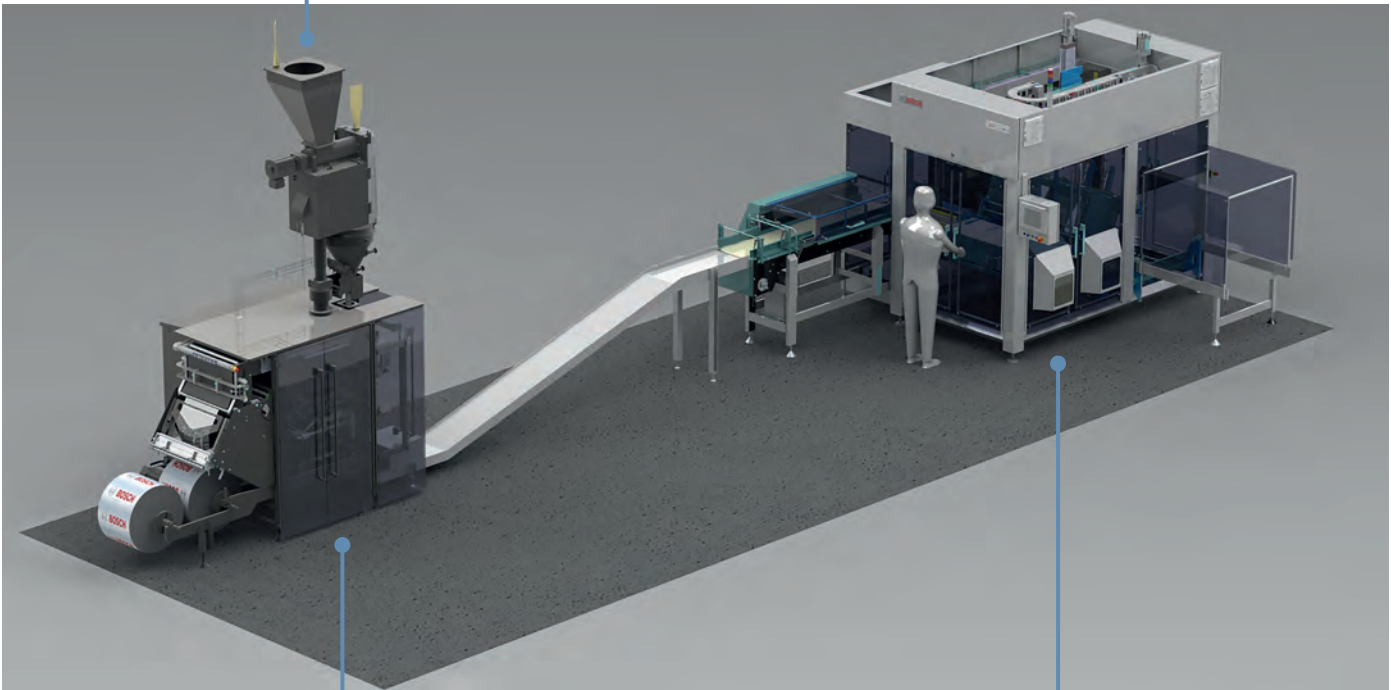

Optimize investment with the SVC platform’s modular design

Module++

Automating your line has never been easier
Grow your business with Module++ from Bosch

Reduce the risk of cross contamination with a complete hygienic solution: the SVC integrates with Bosch’s hygienically executed auger filler and precision checkweigher – specifically designed for milk powder, infant nutrition, gluten and gluten-free flour and other powdery substances

Enhance operator convenience and uptime with the Bosch standard multi-language Human Machine Interface on all line elements. Simplify operations by integrating line components such as printers, auger fillers and weighers with a single HMI

To quickly adapt to changing consumer preferences and new pack styles, Module++ lines can be scaled to incorporate additional Bosch machines such as robotic solutions or case packers in the future

Module++ is an adaptable solution from a single source that allows for minimal coordination time and project costs due to the single point of contact through the entire process, even if Bosch includes additional elements from third parties such checkweighers, printers, case packers, case erectors, case sealers and closure systems

Wide portfolio of vertical packaging solutions from Bosch

The SVC Series

Hygienic machine design
to meet the standards of the
latest food safety regulations

The SVI Series

Entry level to high-end
intermittent motion solutions
allow for multiple bag styles
on the same machine

The SVE Series

With the highest installed
base in the market, the SVE
series offer a wide range of
bag styles and options for
numerous applications
