

Metal Forming

Presses and automatic production lines

VAPTECH

Make what the Planet Needs!

Celebrating
100th
ANNIVERSARY
in industrial engineering
and manufacturing

VAPTECH is a global supplier of custom made solutions and services for hydropower, metal forming and biomass processing industries.

For almost 100 years long history **VAPTECH** has established the worldwide known trademarks

and

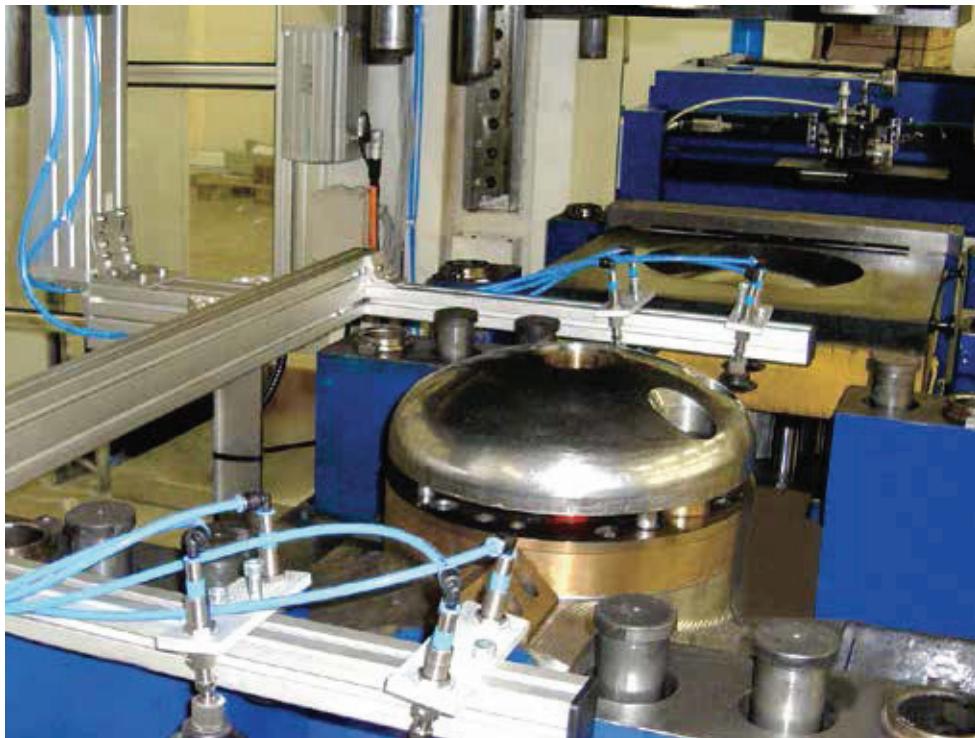

which stand for innovation, reliability and durability of custom made press lines and automation.

For the past 15 years more than 5 000 **VAPTECH** presses have been successfully installed all over the world.

As a global manufacturing company **VAPTECH** cares about the quality of production and its impact on the ecosystems and the employees. In this regard **VAPTECH** constantly improves products, working conditions and performance.

THE COMPANY IS CERTIFIED:

- **ISO 9001:2008**
Quality standard;
- **ISO 14001:2004**
Environmental standard;
- **BS OHSAS 18001:2007** Occupational health and safety standard.

VAPTECH develops, designs, manufactures and installs high quality metal forming press lines with nominal force from 300 to 15 000 kN, suitable for precise cutting, forging, blanking, deep-draw forming, progressive and transfer tool processing and many other.

- **C-frame mechanical presses** with nominal force from 300 to 4 000 kN
- **H-frame mechanical presses** with nominal force from 1 000 to 15 000 kN
- **C-frame hydraulic presses** with nominal force from 600 to 2 500 kN
- **H-frame hydraulic presses** with nominal force from 1 000 to 12 000 kN
- **O-frame presses** with nominal force from 300 to 1 000 kN

With its automated press lines for metal processing, including decoilers, feeders, straighteners and other auxiliary press equipment **VAPTECH** delivers to its customers complete solutions and optimal production technologies.

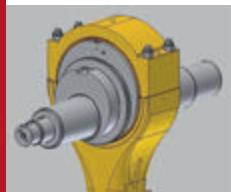

Auxiliary devices developed according the specific needs of the press line:

- Uncoiling devices
- Straightening devices
- Feeding devices
- Devices for part handling
- Quick die change devices
- Dies and tooling
- Scrap removal devices
- Unloading devices
- Special designed automation devices

TECHNICAL DESCRIPTIONS

- Welded steel structure of the press frame, heat treated, sand blasted and painted. The heat treatment provides stress relief of the press frame, guaranteeing maximum stiffness and rigidity.

- Eccentric mechanism completed with forged steel alloy eccentric shaft and eccentric bushing, allowing stroke length adjustment. Our unique solution allows more than 30 different stroke lengths to be pre-set.
- Automatic, semi-automatic or manual stroke adjustment, ensuring convenient and fast stroke length adjustment.
- Connecting rod with pivot bolt, allowing slide position adjustment.

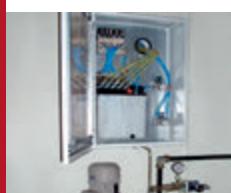

- Cast iron flywheel, providing the necessary energy for all kind of cold-press operations, such as cutting, stamping, punching, bending, sizing, etc.
- Clutch-brake unit with pneumatic control via dual electromagnetic valve.

- Helical gear operating in oil. Compared to the conventional spur gears the helical gear runs more smoothly and quietly, furthermore helical gear can withstand much greater torque than conventional spur gear.

- The use of clamping device instead of keyway connection is a great improvement in the connection between the eccentric shaft and the gear. It provides no stress concentration on the shaft and is much more long lasting than a key.

- Centralized automatic lubrication, providing oil to all necessary points like sliding bearings, slide guides and pivot bolt.
- Oil recirculation – used oil is returned back into the lubrication system, filtered and used again.
- Oil level indication – if the level of the oil is below the limit, the press stops and indicates lubrication fault.
- Oil pressure indication – if there is a pressure drop in the lubrication system the press stops and indicates lubrication fault.
- Oil temperature monitoring – if the oil temperature is over the limit the press stops and indicates lubrication fault.

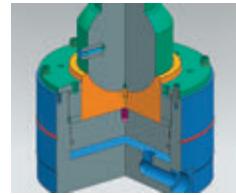

- 6-8 guides slide, which provides high precision and accuracy.
- Equipped with oil collection slots which return the used oil into the lubrication system.
- Knock-out device with adjustable stroke, suitable for different kinds of tools.

- Balancing cylinders of the slide, guaranteeing smooth operation of the press.
- Flexible coupling between the cylinders and the slide providing self adjustment, which ensures the proper work of the cylinders and their long life.

- Hydraulic overload safety device with manual discharge, providing immediate stop of the press in case of overload.
- Hydraulic overload safety device with completely automatic discharge is available as an option.

- Electronic control panel with check control, completed with EU produced components:
 - SIEMENS LOGO controller for the main functionality of the presses;
 - Safety controller Telemecanique or PILZ;
- Frequency control of the motor via inverter, providing speed variation.
- Stroke counter with pre-selection of the desired strokes to be performed before stop of the press.

- Touch screen, visualizing general information regarding the current operation and press settings.
- Motorized slide height adjustment:
 - With a „UP/DOWN“ button;
 - Automatic with an input value on the touch screen;
- „Two hands“ control unit for operation of the press in single stroke mode or automatic stroke mode.
- Reverse of the main motor in case of blocked tool.
- Mechanical barrier guard of the working zone.
- Bolster plate with T-slots according the requirements of the customer and plug for the table of the press.
- Photocell barrier guard.
- Die cushion.
- Pedal for operation of the press in single stroke mode or automatic stroke mode.
- Anti vibration pads, reducing the vibrations transferred from the press to the workshop floor.
